East West University

Subject: Submission of term report on “Clinic Management System”.

Ma’am,

With due respect, we would like to submit you the report on Software Requirement Specification on the above topic you assigned us. The report reflects our effort to gather requirements and analysing them. We have included every step what we have done through the whole time for requirement specification of the mentioned topic.

Therefore, we earnestly hope that you will excuse our error and obliged thereby.

Yours Sincerely,

MD. Shahrukh Hossain Shihab	2022-1-60-372

Acknowledgment

We are highly indebted for getting such a tremendous opportunity to prepare the report on the Clinic Management System. We would like to thank whole-heartedly our course teacher, Anika Tabassum, Lecturer, Department of Computer Science and Engineering, East West University, for providing us with valuable guidance and insights on how to prepare this report. Her constructive feedback and encouragement have been pivotal in completing this project. We are also sincerely grateful to all the individuals and stakeholders who provided their requirements and shared their insights, enabling us to develop a system that addresses practical needs effectively.

Abstract

Clinic Management has become an essential strategy for ensuring efficient and effective healthcare services in today's fast-paced world. This study focuses on developing a system to manage the various aspects of clinic operations, with a primary emphasis on client (patient) management. The objective of this project is to create a Software Requirements Specification (SRS) for a Clinic Management System based on the requirements gathered from stakeholders. The proposed system aims to streamline patient registration, appointment scheduling, medical record management, and billing processes. This report represents the objectives of the system and emphasizes the growing need for such solutions in modern healthcare management to enhance both operational efficiency and patient satisfaction.

Table of Contents

Chapter 1: Introduction	1
1.1 Purpose	1
1.2 Intended Audience	1
1.3 Conclusion	1

Chapter 1: Introduction

This document outlines the Software Requirements Specification (SRS) for the "Clinic Management System".

1.1 Purpose

The purpose of this document is to detail the functional, non-functional, and support requirements of the Clinic Management System. This system aims to improve healthcare operations by offering a digital platform that facilitates communication between patients, doctors, and administrators, ensuring streamlined clinic management and enhanced user experiences.

1.2 Intended Audience

This SRS is intended for the following audiences:

- Customers: To verify that the developed system meets their needs.
- Project Managers: To plan milestones and ensure the development process is on track.
- Designers: To use as a basis for system design.
- Developers: To develop the system functionalities.

1.3 Conclusion

This document provides a comprehensive overview of the project, ensuring all stakeholders have a clear understanding of the system requirements and their alignment with project goals.

Chapter 2: Inception

2.1 Introduction

The inception phase defines how a software project gets started and outlines the scope and nature of the problem to be solved. The goal of this phase is to identify stakeholder needs, resolve conflicts, and establish a foundation for the system's requirements. The following factors were considered:

- Identifying Stakeholders
- Recognizing Multiple Viewpoints
- Working Towards Collaboration
- Asking the First Questions

2.1.1 Identifying Stakeholders

Stakeholders are individuals or groups who will be directly or indirectly affected by the system. These include:

- Patients: Manage appointments, access medical records, and receive reminders.

- Doctors: Manage appointments and access patient information.
- Admins: Maintain clinic data, manage appointments, and oversee billing.
- Software Developers: Design, build, and maintain the system.

An initial list of stakeholders will evolve as more contributors are identified through discussions.

2.1.2 Recognizing Multiple Viewpoints

Different stakeholders have varied requirements from the system. To satisfy their needs, most features must cater to these perspectives:

Patients' Viewpoint

- Error-free system
- Strong authentication for data security
- Easy access to medical records and appointment scheduling
- View doctor list and prescriptions.
- Make secure payments.
- Secure handling of personal health data

Doctors' Viewpoint

- User-friendly interface for managing appointments.
- Reliable access to patient data
- Strong authentication for data security

Admins' Viewpoint

- Comprehensive data management
- Accurate billing and financial record-keeping
- Ability to monitor doctor availability.
- Strong authentication for data security.

Developers' Viewpoint

- Clear and conflict-free requirements
- Adequate resources for development
- Secure and reliable design parameters

2.1.3 Working Towards Collaboration

To reconcile conflicting requirements and prioritize features, the following steps were followed:

1. Identify common and conflicting requirements.
2. Categorize the requirements.

3. Use stakeholder feedback to prioritize requirements.
4. Make final decisions collaboratively.

Common Requirements:

- Web-based interface accessible from any computer with internet access.
- Maintain a database of users, appointments, and medical records.
- Enable users to search for doctors.

Conflicting Requirements:

- Debate over requiring login for accessing general clinic information.
- Strong authentication challenges during patient check-in.

Final Requirements:

- Error-free, easily accessible system.
- Role-based access control for different users.
- Allow logged-in users to book and manage appointments.
- Enable administrators to oversee system parameters and user roles.
- Support online options.

2.1.4 Asking the First Questions

Initial inquiries focused on:

- Stakeholder needs and project goals.
- Specific challenges and constraints.
- Identifying priority features and requirements.

2.2 Conclusion

The inception phase establishes a foundational understanding of the Clinic Management System's objectives, guiding subsequent development phases.

Chapter 3: Elicitation

3.1 Introduction

Requirements elicitation is the process of gathering and refining the system requirements from stakeholders. This ensures the developed system aligns with stakeholder expectations and project goals.

3.2 Eliciting Requirements

This phase combines problem-solving, elaboration, and specification. Key tasks include:

- Collaborative requirements gathering.
- Quality function deployment.

- Defining use case scenarios.

3.3 Collaborative Requirements Gathering

Regular meetings and discussions with stakeholders were conducted to:

- Identify system needs and expectations.
- Resolve ambiguities and conflicts in requirements.
- Prioritize critical functionalities.

3.4 Quality Function Deployment (QFD)

QFD translates customer needs into technical requirements, focusing on maximizing satisfaction.

3.4.1 Normal Requirements

The normal requirements are the objectives and goals stated for a product or system during meetings with the customer. The presence of these requirements fulfils customers' satisfaction. These are the normal requirements for the Clinic Management System:

1. Provide role-based access control for functionalities.
2. Enable logged-in users to book and cancel appointments.
3. Provide detailed medical records to patients and authorized personnel.
4. Maintain a centralized database for storing patient, doctor, and appointment information.
5. Maintain accurate financial records, including billing and payment details.
6. Track doctor availability and allocate appointments accordingly.
7. Ensure data security and privacy compliance.
8. Allow online payment integration for billing.
9. Provide features for clinic staff to manage inventory and supplies.

3.4.2 Expected Requirements

These requirements are intrinsic to the system and may not always be explicitly stated by customers. Their absence, however, would result in significant dissatisfaction. Below are the expected requirements for the Clinic Management System:

1. Error-free software operation.
2. Robust authentication system to ensure secure access.
3. Intuitive and user-friendly interface for all user roles.
4. Effective system with quick response times.
5. Clearly defined and unambiguous features.
6. Alerts for actions.
7. Support for updating patient and clinic data by authorized personnel.
8. The system should automatically check doctor availability.

3.4.3 Exciting Requirements

These requirements exceed customer expectations and greatly enhance satisfaction when implemented. The exciting requirements for the Clinic Management System include:

1. Providing detailed and helpful error messages for invalid inputs.
2. Aesthetic and intuitive user interface consistent with modern web applications.
3. Personalized dashboards for patients, doctors, and administrators.

Chapter 4: Scenario-Based Modelling

4.1 Introduction

Scenario-based modelling describes the system from the user's perspective. It serves as input for other modelling elements and ensures alignment between design and user requirements.

4.2 Usage Scenario

The Clinic Management System offers a digital platform to improve patient experience and conduct healthcare operations by providing smooth communication between patients, doctors, and administrators.

Patients can manage their medical care by registering and logging into an account through the application. They can schedule appointments with available doctors by choosing a time and date that works for them. Additionally, patients can access diagnostic findings, view billing information, and read their profile. To select the appropriate expert for their needs, patients can use the program to peruse a list of doctors.

Doctors can view their appointments by logging in, because of this they can be prepared for the appointments on time, and they can request to cancel appointments.

Administrators use the system to maintain patient and doctor data, guaranteeing that the latest information is always accessible. They can view patient data, add, and delete doctor availability. Also, they can approve doctors request to cancel appointments. The technology guarantees a smooth billing process for patients by enabling administrators to create and view billing records.

This system streamlines clinic administration, allowing administrators to maintain effective healthcare facility and physicians to schedule appointments, and patients to get care conveniently.

4.3 Use Case Scenario

Level 0	Level 1	Level 2
Clinic Management System	Authentication	Log In
		Log Out
	Patient Management	Book Appointment
		View Profile
		Update Profile
		Access Prescription
		View Doctor List
	Doctor Management	View Appointments
		Cancel Appointments
		View Patient list
		View Profile
		Update Profile
	Admin Management	View Patients
		View Doctors
		Add Doctor
		Delete Doctor
		Remove Appointment
	Billing Management	Generate Bill
		View Bills
		Pay Bill
	Appointment Management	Schedule Appointment

interactions between users and the system. Key scenarios include:

- Authentication.
- Appointment management.
- Billing and payment processing.

Chapter 9: Conclusion

The development of a Clinic Management System is an essential step toward streamlining healthcare operations and improving patient care delivery. Through the analysis and specification of functional and non-functional requirements, this report demonstrates how the system addresses the needs of various stakeholders, including patients, doctors, and administrators.

By integrating features such as appointment scheduling, patient record management, billing, and secure authentication, the system ensures operational efficiency, reduces manual workload, and enhances user experience. The use of modern design and modelling methodologies has allowed for the creation of a robust and scalable solution that is adaptable to the evolving needs of healthcare facilities.

In conclusion, this system represents a significant advancement in the management of clinics, paving the way for better communication, improved organization, and enhanced patient satisfaction. With proper implementation, the Clinic Management System has the potential to set a new standard for healthcare management practices.
